FAX 716.681.3170

Lancaster Small Animal Hospital would like to welcome you and your special furry friend! In order to provide your small mammal with the best service available, the Lancaster Small Animal Hospital has instituted this SMALL MAMMAL Program of procedures and treatments we recommend for small mammals such as hamsters, chinchillas, rabbits and guinea pigs.

Small mammals make wonderful pets and are fun additions to any family. Small mammals include but are not limited to: rabbits, prairie dogs, hedgehogs, chinchillas, sugar gliders. Guinea pigs, hamsters, rats and mice. The average small mammal does not display the signs of illness until very late in the course of their disease. Prior to their domestication this was necessary to avoid being singled out as prey by other animals. Unfortunately, this makes their medical and surgical care a special challenge. For this reason it is important to have your pet examined by a veterinarian AT LEAST once a year. Additionally because illness is often masked in these species, routine laboratory tests are highly recommended on an annual basis. Basic screening provides especially useful information when first obtaining your pet from a breeder or pet store.
